

YardFresh Community Market Practice SBA

Full School-Based Assessment project brief

REFERENCE EXAMPLE ONLY

Use this document to study the wording, steps, structure and quality of completed work. Do not submit, rename or copy this SPARK project as your own SBA.

Project: YardFresh Community Market

Sector: Business

Description of Project

YardFresh Community Market sells groceries and locally produced goods. The owner needs better records for products, suppliers, sales and stock levels. The business also wants a simple customer information page and a program that calculates purchase totals and discounts.

Build a small business solution that tracks inventory, analyses sales, produces supplier communication, presents customer information and automates checkout calculations.

How to use this practice SBA

- Read the whole project before starting any software task.
- Complete the sections in order so information remains consistent from one file to the next.
- The wording and data are original SPARK practice material. Your teacher's current assignment takes priority.
- The practice task headings follow the style of common CSEC school assignments. Current CXC limits should still be followed.

Contents

Section	Practice weighting
Database Management	20 practice marks
Spreadsheet	20 practice marks
Word Processing	20 practice marks
Web Page Design	10 practice marks
Problem-Solving and Programming	15 practice marks

Database Management - 20 practice marks

Task A - Tables

1. Create a database named YardFreshDB_YourFullName.accdb.
2. Create the Product, Supplier and StockPurchase tables using suitable field names, data types and primary keys.
3. Enter realistic records and apply the validation rules required by the project.
4. Create the required relationships and enforce the correct links between the tables.

Task B - Queries and Form

1. Create a query called Low Stock. Show products at or below the reorder level. Include ProductName, Category, QuantityInStock and ReorderLevel.
2. Create a query called Supplier Orders. Join Product, Supplier and StockPurchase. Calculate the order value.
3. Create Product Information Form with Supplier subform and clear stock headings.

Task C - Report

1. Create Stock Value Report grouped by Category and showing total stock value.

Spreadsheet - 20 practice marks

Task A - Calculations and Functions

1. Create SalesAnalysis_YourFullName.xlsx with worksheets named ProductSales and Dashboard. Enter or import the project data into ProductSales and format it as a clear data table.
2. Create the main calculations using efficient formulas. The SPARK reference uses formulas such as $=B2*C2$, $=IF(D2 \geq 10000, D2*5\%, 0)$ and $=(D2-E2)*(1+\$M\$2)$.
3. Use at least three suitable functions. Functions used in the SPARK reference include SUM, AVERAGE, COUNTIF, IF, VLOOKUP.

Task B - Analysis and Presentation

1. Sort and filter the data to answer this requirement: Show products in Grocery or Beverage with QuantityInStock below 10.
2. Create a summary showing Pivot-style summary of SalesValue by Category. Then create a suitable chart.
3. Create a linked total or key result on the Dashboard worksheet so that it updates when the detailed sheet changes.

Word Processing - 20 practice marks

Task A - Fillable Form

1. Create a document named **Supplier Registration Form_YourFullName.docx**. The form must collect the information needed for this project and include clear instructions.
2. Use suitable form controls. The SPARK reference uses: Supplier name text box; Parish drop-down list; Product-category drop-down list; Delivery check box.

Task B - Mail Merge

1. Create a professional main document called **Reorder Notice**. Use the project data as the mail-merge source.
2. Insert the following merge fields where they make sense: **SupplierName**, **ProductName**, **QuantityRequired**, **RequiredDate**.
3. Complete the final merged output and include one relevant table, chart or other imported item from the connected SBA work where appropriate.

Web Page Design - 10 practice marks

Web Page Design

1. Create one web page for YardFresh Community Market. The page must be suitable for the intended audience and include a project logo.
2. Organise the page into these content sections: Fresh This Week, Product Categories, Delivery Information, Opening Hours, Contact.
3. Add at least two suitable hyperlink types and test them.
4. Add at least one relevant graphic and make sure the page remains readable at different screen sizes.
5. Save, test and prepare the final web-page evidence.

Problem-Solving and Programming - 15 practice marks

Task A - Problem Definition and Algorithm

1. Write a clear problem statement for the following task: Calculate the amount each customer pays after discount and GCT and display the total sales processed.
2. Identify the inputs, processes and outputs, then write pseudocode containing at least one selection and one repetition statement.

Task B - Trace Table and Test Data

1. Create a trace table using at least three sets of test data. Include normal data, a boundary case and an invalid or unusual case where appropriate.

Task C - Program Implementation

1. Implement the algorithm in the programming language selected by your centre. The SPARK Pascal reference is saved as MarketCheckout_YourFullName.pas.
2. Test the program and capture evidence that the expected and actual results agree.

Task D - Documentation

1. Create ProgramDocumentation_YourFullName.pdf containing the problem definition, algorithm, source code, trace table, test data and screenshots of program execution.

Submission checklist

- YardFreshDB_YourFullName.accdb
- SalesAnalysis_YourFullName.xlsx
- Supplier Registration Form_YourFullName.docx
- Reorder Notice_YourFullName.docx
- One completed web page with its supporting files
- MarketCheckout_YourFullName.pas
- ProgramDocumentation_YourFullName.pdf

Final reminder

Keep the same names, codes, dates, fees and rules across your database, spreadsheet, word-processing, web and programming work. A strong SBA reads like one connected project.
