

Spreadsheet Completed SPARK Reference

YardFresh Community Market - question-by-question completed guide

REFERENCE EXAMPLE ONLY

Use this document to study the wording, steps, structure and quality of completed work. Do not submit, rename or copy this SPARK project as your own SBA.

Project: YardFresh Community Market

Sector: Business

Questions being answered

Task A - Calculations and Functions

1. Create SalesAnalysis_YourFullName.xlsx with worksheets named ProductSales and Dashboard. Enter or import the project data into ProductSales and format it as a clear data table.

How SPARK completed it

- Place one field name in each column heading and one record in each row.
- Apply appropriate number, date, currency and percentage formats.
- Freeze or emphasise the heading row if the sheet is long.

Completed result

Completed workbook: SalesAnalysis_YourFullName.xlsx. Detailed data is stored on ProductSales; analysis is placed on Dashboard.

2. Create the main calculations using efficient formulas. The SPARK reference uses formulas such as $=B2*C2$, $=IF(D2 \geq 10000, D2*5\%, 0)$ and $=(D2-E2)*(1+\$M\$2)$.

How SPARK completed it

- Write the formula in the first data row using cell references, not typed answers.
- Check whether any rate or lookup cell must remain fixed.
- Fill the formula down and inspect the first, middle and last copied formula.

Completed result

Reference formulas: $=B2*C2$; $=IF(D2 \geq 10000, D2*5\%, 0)$; $=(D2-E2)*(1+\$M\$2)$.

3. Use at least three suitable functions. Functions used in the SPARK reference include SUM, AVERAGE, COUNTIF, IF, VLOOKUP.

How SPARK completed it

- Choose each function because it answers a question in the scenario.
- Use cell ranges instead of typing individual values where possible.
- Check each function result with a small manual calculation or count.

Completed result

Functions demonstrated: SUM, AVERAGE, COUNTIF, IF, VLOOKUP.

Task B - Analysis and Presentation

1. Sort and filter the data to answer this requirement: Show products in Grocery or Beverage with QuantityInStock below 10.

How SPARK completed it

- Apply the sort first when the question specifies an order.
- Turn on filters and apply every criterion in the requirement.
- Check the visible records one by one before taking evidence.

Completed result

Completed filter requirement: Show products in Grocery or Beverage with QuantityInStock below 10.

2. Create a summary showing Pivot-style summary of SalesValue by Category. Then create a suitable chart.

How SPARK completed it

- Create the summary from the clean data range.
- Use category fields as row labels and a numeric field as the value.
- Insert the chart from the summary and add a clear title.
- Avoid 3-D effects that make values difficult to compare.

Completed result

Completed summary: Pivot-style summary of SalesValue by Category. Completed chart: Column chart titled Sales by Category.

3. Create a linked total or key result on the Dashboard worksheet so that it updates when the detailed sheet changes.

How SPARK completed it

- Click the destination cell on Dashboard.
- Type =, switch to ProductSales, and select the source result cell.
- Press Enter and test the link by changing one source value.

Completed result

The SPARK Dashboard sheet contains a direct worksheet link to the main total calculated on ProductSales.

Completed workbook plan

Item	Completed SPARK setup
Workbook	SalesAnalysis_YourFullName.xlsx
Detail sheet	ProductSales
Summary sheet	Dashboard
Filter requirement	Show products in Grocery or Beverage with QuantityInStock below 10.
Summary	Pivot-style summary of SalesValue by Category.
Chart	Column chart titled Sales by Category.

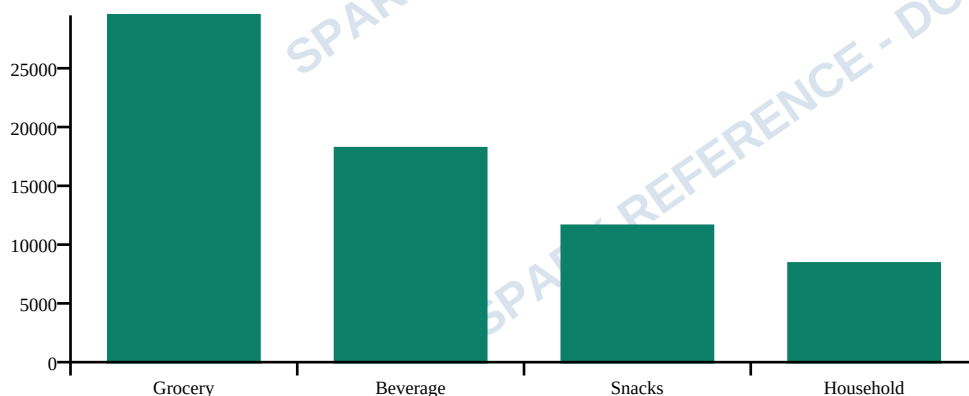

Reference data extract

ProductID	ProductName	Category	UnitPrice	QuantityInStock	ReorderLevel
PR001	Rice 2kg	Grocery	980	25	10
PR002	Plantain Chips	Snacks	350	8	12
PR003	Fresh Juice	Beverage	500	18	8
PR004	Ground Coffee	Beverage	1800	6	8
PR005	Bath Soap	Household	420	30	10
PR006	Cereal	Grocery	1200	9	10

Formula evidence

- =B2*C2
- =IF(D2>=10000,D2*5%,0)
- =(D2-E2)*(1+\$M\$2)
- Functions used: SUM, AVERAGE, COUNTIF, IF, VLOOKUP

Completed analysis chart

What to check in the real workbook

- Copied formulas change relative references correctly.

- Fixed rates keep the absolute reference when filled down.
- The summary changes when source data changes.
- The chart title and labels describe the data accurately.

Final section check

- Every question in the practice brief has a visible completed result.
- The output uses the same project facts as the other sections.
- The work has been tested or checked rather than assumed correct.
- This SPARK example is watermarked and is for study only. Build your own teacher-assigned SBA.
