

Database Management Completed SPARK Reference

BlueWave Island Tours - question-by-question completed guide

REFERENCE EXAMPLE ONLY

Use this document to study the wording, steps, structure and quality of completed work. Do not submit, rename or copy this SPARK project as your own SBA.

Project: BlueWave Island Tours

Sector: Tourism

Questions being answered

Task A - Tables

1. Create a database named BlueWaveTours_YourFullName.accdb.

How SPARK completed it

- Open your database software and create a blank database.
- Save it immediately with the exact filename in the question.
- Keep the database and all later SBA files inside one organised project folder.

Completed result

SPARK reference filename: BlueWaveTours_YourFullName.accdb.

2. Create the Customer, TourPackage and Booking tables using suitable field names, data types and primary keys.

How SPARK completed it

- Create Customer first and enter the fields exactly as planned in your data dictionary.
- Repeat the process for TourPackage and Booking.
- Choose the primary key before entering records. Check currency, date and numeric data types carefully.

Completed result

Completed table structures:

Customer: CustomerID - Short Text, primary key, FirstName - Short Text, LastName - Short Text, Country - Short Text, Phone - Short Text, Email - Short Text

TourPackage: PackageCode - Short Text, primary key, PackageName - Short Text, Parish - Short Text, AdultRate - Currency, ChildRate - Currency, Capacity - Number

Booking: BookingID - Short Text, primary key, CustomerID - Short Text, foreign key, PackageCode - Short Text, foreign key, TourDate - Date/Time, Adults - Number, Children - Number, AmountPaid - Currency

3. Enter realistic records and apply the validation rules required by the project.

How SPARK completed it

- Enter enough varied records to make your queries meaningful.
- Use validation rules for fields with a limited set or range of allowed values.
- Test the validation by deliberately entering one invalid value and confirming that the software rejects it.

Completed result

The SPARK completed database uses fictional records with different categories, dates, fees and statuses so every query can be tested.

4. Create the required relationships and enforce the correct links between the tables.

How SPARK completed it

- Open the Relationships window.
- Add all tables and drag each primary key to the matching foreign key.
- Check the real-world relationship before selecting referential-integrity options.

Completed result

Customer.CustomerID 1-to-many Booking.CustomerID; TourPackage.PackageCode 1-to-many Booking.PackageCode.

Task B - Queries and Form

1. Create a query called Upcoming Tours. Show bookings with TourDate on or after today. Include customer, package and tour date.

How SPARK completed it

- Add only the table or tables required by the question.
- Add the requested fields to the query grid.
- Enter the criterion: TourDate >= Date().
- Run the query and compare every returned record with the source data.

Completed result

Query name: Upcoming Tours. Criterion used: TourDate >= Date().

2. Create a query called Outstanding Payments. Join Customer, TourPackage and Booking and calculate BookingCost and Balance.

How SPARK completed it

- Add the related tables and confirm the join lines are correct.
- Add the display fields requested in the question.
- Create the calculated field using: BookingCost: ([Adults]*[AdultRate])+([Children]*[ChildRate]); Balance: [BookingCost]-[AmountPaid].
- Run the query and calculate one record manually to verify the result.

Completed result

Query name: Outstanding Payments. Calculation used: BookingCost: ([Adults]*[AdultRate])+([Children]*[ChildRate]); Balance: [BookingCost]-[AmountPaid].

3. Create Customer Information Form with Booking subform and clear tour headings.

How SPARK completed it

- Use the main record source for the parent form.
- Use the related table as the subform source.
- Add a clear title, useful instructions and navigation controls.
- Open several records and confirm the subform changes with the main record.

Completed result

Completed form design: Customer Information Form with Booking subform and clear tour headings.

Task C - Report

1. Create Package Revenue Report grouped by PackageName with booking count and total BookingCost.

How SPARK completed it

- Use a query as the report source when it already contains the correct fields or calculation.
- Apply the exact grouping and sorting required by the question.
- Add the required summary in the group or report footer.
- Preview the report and correct clipped headings, blank pages and unreadable columns.

Completed result

Completed report: Package Revenue Report grouped by PackageName with booking count and total BookingCost.

Completed database structure

Customer

Field	Design
CustomerID	Short Text, primary key
FirstName	Short Text
LastName	Short Text
Country	Short Text
Phone	Short Text
Email	Short Text

TourPackage

Field	Design
PackageCode	Short Text, primary key
PackageName	Short Text
Parish	Short Text
AdultRate	Currency
ChildRate	Currency
Capacity	Number

Booking

Field	Design
BookingID	Short Text, primary key
CustomerID	Short Text, foreign key
PackageCode	Short Text, foreign key
TourDate	Date/Time
Adults	Number
Children	Number
AmountPaid	Currency

Relationships

Customer.CustomerID 1-to-many Booking.CustomerID; TourPackage.PackageCode 1-to-many Booking.PackageCode.

Sample records

BookingID	CustomerName	PackageCode	Adults	Children	AmountPaid
B001	Nadia Cole	CUL	2	1	5000
B002	Eric Stone	ADV	4	2	12000
B003	Maya Singh	NAT	1	0	4000
B004	Troy Lewis	CUL	3	2	15000
B005	Sarah James	NAT	2	2	9000
B006	Andre Morgan	ADV	1	1	6000

Completed queries

Upcoming Tours

Show bookings with TourDate on or after today. Include customer, package and tour date.

Criterion: TourDate >= Date()

Outstanding Payments

Join Customer, TourPackage and Booking and calculate BookingCost and Balance.

Calculation: BookingCost: ([Adults]*[AdultRate])+([Children]*[ChildRate]); Balance: [BookingCost]-[AmountPaid]

Completed form

Customer Information Form with Booking subform and clear tour headings.

Completed report

Package Revenue Report grouped by PackageName with booking count and total BookingCost.

Final section check

- Every question in the practice brief has a visible completed result.
- The output uses the same project facts as the other sections.
- The work has been tested or checked rather than assumed correct.
- This SPARK example is watermarked and is for study only. Build your own teacher-assigned SBA.
