

# Spreadsheet Completed SPARK Reference

SPARK Sports Academy - question-by-question completed guide

## REFERENCE EXAMPLE ONLY

Use this document to study the wording, steps, structure and quality of completed work. Do not submit, rename or copy this SPARK project as your own SBA.

Project: SPARK Sports Academy

Sector: Sports

# Questions being answered

## Task A - Calculations and Functions

1. Create AcademyFees\_YourFullName.xlsx with worksheets named Members and Summary. Enter or import the project data into Members and format it as a clear data table.

### How SPARK completed it

- Place one field name in each column heading and one record in each row.
- Apply appropriate number, date, currency and percentage formats.
- Freeze or emphasise the heading row if the sheet is long.

### Completed result

Completed workbook: AcademyFees\_YourFullName.xlsx. Detailed data is stored on Members; analysis is placed on Summary.

2. Create the main calculations using efficient formulas. The SPARK reference uses formulas such as =D2\*3, =IF(E2="Junior",F2\*10%,0) and =F2-G2+\$M\$2.

### How SPARK completed it

- Write the formula in the first data row using cell references, not typed answers.
- Check whether any rate or lookup cell must remain fixed.
- Fill the formula down and inspect the first, middle and last copied formula.

### Completed result

Reference formulas: =D2\*3; =IF(E2="Junior",F2\*10%,0); =F2-G2+\$M\$2.

3. Use at least three suitable functions. Functions used in the SPARK reference include SUM, AVERAGE, IF, COUNTIF, VLOOKUP.

### How SPARK completed it

- Choose each function because it answers a question in the scenario.
- Use cell ranges instead of typing individual values where possible.
- Check each function result with a small manual calculation or count.

### Completed result

Functions demonstrated: SUM, AVERAGE, IF, COUNTIF, VLOOKUP.

## Task B - Analysis and Presentation

1. Sort and filter the data to answer this requirement: Show Active athletes in Swimming or Football only.

### How SPARK completed it

- Apply the sort first when the question specifies an order.
- Turn on filters and apply every criterion in the requirement.
- Check the visible records one by one before taking evidence.

## Completed result

Completed filter requirement: Show Active athletes in Swimming or Football only.

**2. Create a summary showing Pivot-style summary of outstanding Balance by Programme. Then create a suitable chart.**

## How SPARK completed it

- Create the summary from the clean data range.
- Use category fields as row labels and a numeric field as the value.
- Insert the chart from the summary and add a clear title.
- Avoid 3-D effects that make values difficult to compare.

## Completed result

Completed summary: Pivot-style summary of outstanding Balance by Programme. Completed chart: Column chart titled Outstanding Balance by Programme.

**3. Create a linked total or key result on the Summary worksheet so that it updates when the detailed sheet changes.**

## How SPARK completed it

- Click the destination cell on Summary.
- Type =, switch to Members, and select the source result cell.
- Press Enter and test the link by changing one source value.

## Completed result

The SPARK Summary sheet contains a direct worksheet link to the main total calculated on Members.

# Completed workbook plan

| Item               | Completed SPARK setup                                    |
|--------------------|----------------------------------------------------------|
| Workbook           | AcademyFees_YourFullName.xlsx                            |
| Detail sheet       | Members                                                  |
| Summary sheet      | Summary                                                  |
| Filter requirement | Show Active athletes in Swimming or Football only.       |
| Summary            | Pivot-style summary of outstanding Balance by Programme. |
| Chart              | Column chart titled Outstanding Balance by Programme.    |

## Reference data extract

| AthleteID | FirstName | LastName | Age | ProgrammeCode | MonthlyFee | Status |
|-----------|-----------|----------|-----|---------------|------------|--------|
| A001      | Alicia    | Brown    | 12  | SWM           | 9000       | Active |
| A002      | Dario     | King     | 15  | FTB           | 7500       | Active |
| A003      | Renee     | Blake    | 11  | NET           | 7000       | Active |
| A004      | Malik     | Grant    | 14  | ATH           | 8000       | Active |
| A005      | Jada      | Campbell | 13  | SWM           | 9000       | Active |
| A006      | Andre     | Lewis    | 10  | FTB           | 7500       | Active |

## Formula evidence

- =D2\*3
- =IF(E2="Junior",F2\*10%,0)
- =F2-G2+\$M\$2
- Functions used: SUM, AVERAGE, IF, COUNTIF, VLOOKUP

## Completed analysis chart

## What to check in the real workbook

- Copied formulas change relative references correctly.

- Fixed rates keep the absolute reference when filled down.
- The summary changes when source data changes.
- The chart title and labels describe the data accurately.

## Final section check

- Every question in the practice brief has a visible completed result.
- The output uses the same project facts as the other sections.
- The work has been tested or checked rather than assumed correct.
- This SPARK example is watermarked and is for study only. Build your own teacher-assigned SBA.
